

## Step plate

The design of the impact surface creates a wear-minimising impact angle. This reduces abrasion and allows the material properties (grain size) to be retained. Step plates are recommended for applications from a grain size of 32 mm. Step plates can be fitted quickly and easily with bolts. If holes are present, the step plates can simply be screwed directly on site without bolts.

### **Dimensions:**

- Length / Width: 500 x 500 mm
- Thickness: 50 and 65 mm
